

Solution Architecture

Architecture Overview :

The system architecture explains how data flows from raw datasets to final visualization and deployment.

Architecture Flow :

Architecture Explanation :

- Raw EV datasets are collected in CSV format.
- Data is cleaned and structured for analysis.
- Tableau connects to datasets and generates visualizations.
- Dashboards and stories summarize insights.
- Final dashboards are published on Tableau Public.
- GitHub stores documentation and project files.

Result :

This architecture ensures smooth data flow from collection to final visualization and sharing.
